

Dr Skin Self-Lubricating TPE Care Guide

A self-lubricating upgrade to our proprietary X5 superior TPE:

- Independently lab tested
- Body-safe alternative to lower grade jelly toys on the market

For optimal cleanliness and safety:

- Clean before and after use, using warm water and mild soap or your favourite toy cleaner
- Store your toy in a lint-free storage pouch

Renewal instructions:

To ensure your toy remains feeling new, dust it with cornstarch after cleaning. This will leave it feeling soft and can easily be cleaned off before your next use.

Self-lubricating information:

Just add a bit of water or saliva for a slick feeling during use. This will last up to 12 uses and afterwards, the self-lubricating toy can be utilized with any water-based lubricant.
